

HE MAHI KA TAEA E KOE WHAT YOU CAN DO ABOUT CLIMATE CHANGE

REDUCE, REUSE, RECYCLE, REFUSE, REPAIR

All products require energy and materials to be built, packaged, transported and sold. Reducing how much you buy is good for the environment and your wallet.

DRIVE LESS, FLY LESS

The transport sector contributes 17 per cent of New Zealand's total greenhouse gas emissions.

EAT LESS MEAT

Red meat production produces significantly more greenhouse gas emissions than the production of chicken meat, fruit, vegetables and cereals.

PLANT TREES

A regenerating native forest can remove more than 8 tonnes of carbon dioxide per hectare per year from the atmosphere over its first 50 years.

REDUCE YOUR ELECTRICITY USE

New Zealand has a high level of renewable electricity production, but this is still supplemented by burning fossil fuels which create greenhouse gas.

SHOP AT YOUR LOCAL FRUIT AND VEG MARKET

Did you know that a typical meal bought from a supermarket uses 4 to 17 times more petrol for transport than the same meal using local ingredients?
